Brunner Gravuren was founded by Arthur Brunner in 1991 – after 14 years' experience in this sector. From the beginning his intention has been to concentrate on work that demands the highest standards. Precision, reliability and an eye for the 3-dimensional interpretation of complex forms – these are qualities that can no longer be taken for granted today. In retrospect, Arthur Brunner's decision to go independent has paid off. Embossing Dies for the Printing Industry Thanks to our state-of-the-art production technology we can supply at short notice and on schedule.
