Sheet Metal Processing, Plant Construction, Apparatus Construction, Water Jet Cutting, Laser Cutting? Salzgeber AG Winterthur is a family business that has been based in Winterthur for around 85 years and is your competent partner in the areas of: Sheet Metal Processing Plant Construction Apparatus Construction Water Jet Cutting Laser Cutting? Welding, water jet cutting, laser cutting, and much more: all types of sheet metal processing at Salzgeber AG – performed with high quality, precision, and efficiency

Activities
Programming
Laser Cutting / Laser Cutting Services
Waterjet
Cutting
Shearing
Bending
Rounding
Welding
Vibratory Grinding/Polishing
Deburring -
Rounding - Finish Grinding
Lapping
Surface Treatment
Other
Nitrogen Generator
Our customers belong to a wide variety of industries. Our activities are as diverse as your requirements. We manufacture:
Electric vehicle components
Heat exchange parts
Covers for construction machinery
Rail (passenger transport)
Covers for printer machines
Components for high pressure compressors
Sheet metal parts for electronic components
Ventilation component
Tanks for the chemical industry
Different pipe designs
Locksmith work
Welding work according to ISO 3834-3
Parts for prototypes and series

Welding
There's no question about it: welding is a classic process in sheet metal fabrication. While everyone is familiar with this process, not everyone may know how welding works. The secret: Two pieces of metallic material are fused together using extremely high heat. The edges melt and merge together. Naturally, the specific properties of the respective materials must be taken into account. However, our highly trained and certified staff, who are also experts in welding, understand the critical details. For this reason, a wide range of orders can be accomplished using the appropriate welding techniques. Rounding
Rough and finish rounding in a single machine! Thanks to the special rolling concept and robust construction, we manufacture extremely versatile and cost-effective components in both individual production and serial production. Whether round or conical rounding, we can handle up to one meter.

Bending
Precise bending at the highest level with 250 tons
A few clicks, and the program for this system is ready.
First-class bending results thanks to Pressure-Reference Technology with fully automatic dynamic crowning.
With a pressing force of 250 tons and a bending length of 3000 mm, a wide range of bending processes from 0.3 mm to 12 mm is possible.
With our new press brake with 80 tons of

pressing force and a bending length of 1550 mm for optimal process speed for individual and series parts.
