Special Parts  
More than 120.000 different standard parts! we deliver annually 14.000 different special parts!

**LaserMarker Closed LaserMarker**  
The fascinating thing about laser marking is its simplicity. You design in the software what and how it should be displayed, and determine the size. On your workpiece you will see a red-framed rectangle that corresponds to the desired size of your design. Position the workpiece so that the result is optimal. Then press the button and whoosh, the marking is done.

**Open LaserMarker**  
Whenever greater flexibility is required, it makes sense to use an open LaserMarker. You have significantly fewer restrictions in terms of workpiece size. In addition, you

can swivel the LaserMarker head as desired, which makes markings on vertical surfaces, for example, possible.

32-PLM20

32-PLMPF30-1 Der offene XXL Laser Our experienced employees also have particular know-how in the important areas: hard turning and reworking. In the new, modern online shop of Ramseier, you also receive cores, contour ejectors, flat ejectors, hydraulic cylinders and ejectors, punches, high-performance gas springs and a large selection of cutting punches.
